

What is Stomach Health Test?

It is a non-invasive, painless and simple blood test used to determine the stomach health. It also reports any gastric problems, capacity of the stomach to produce gastric acid and helps in identifying early acid-related disorders that can be treated effectively as part of routine care, or else, could lead to conditions, such as

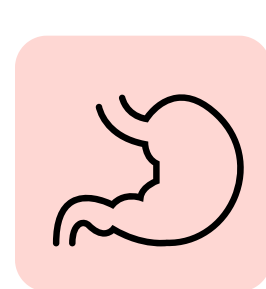

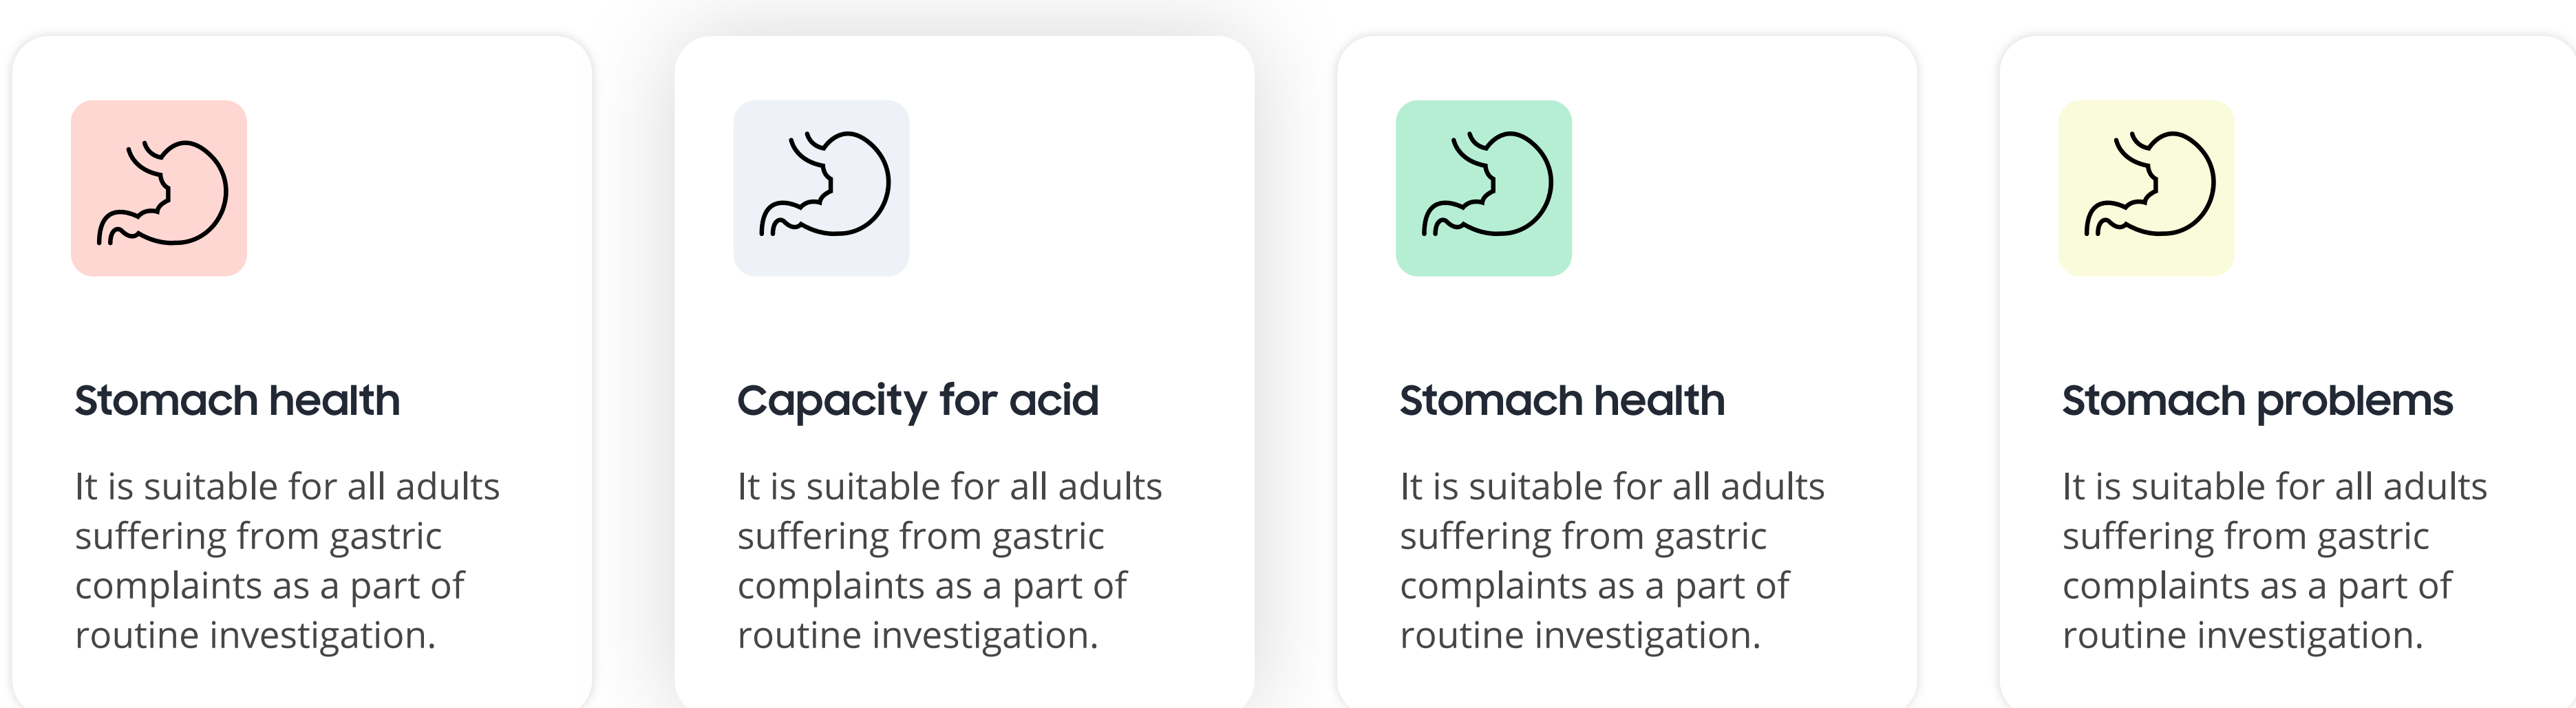

Deficiency of Vitamin B12, Calcium, Magnesium, Zinc, Iron

Acid-disorders

Stomach-ulcer disease or stomach cancer, if untreated

It is suitable for all adults suffering from gastric complaints as a part of routine investigation. It provides reassurance when the risk of disease is low.

A SIMPLE BLOOD TEST TO DETERMINE

Stomach health

It is suitable for all adults suffering from gastric complaints as a part of routine investigation.

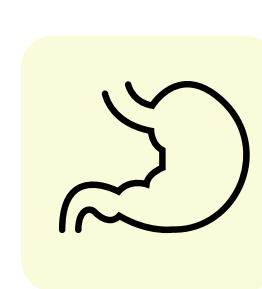

Capacity for acid

It is suitable for all adults suffering from gastric complaints as a part of routine investigation.

Stomach health

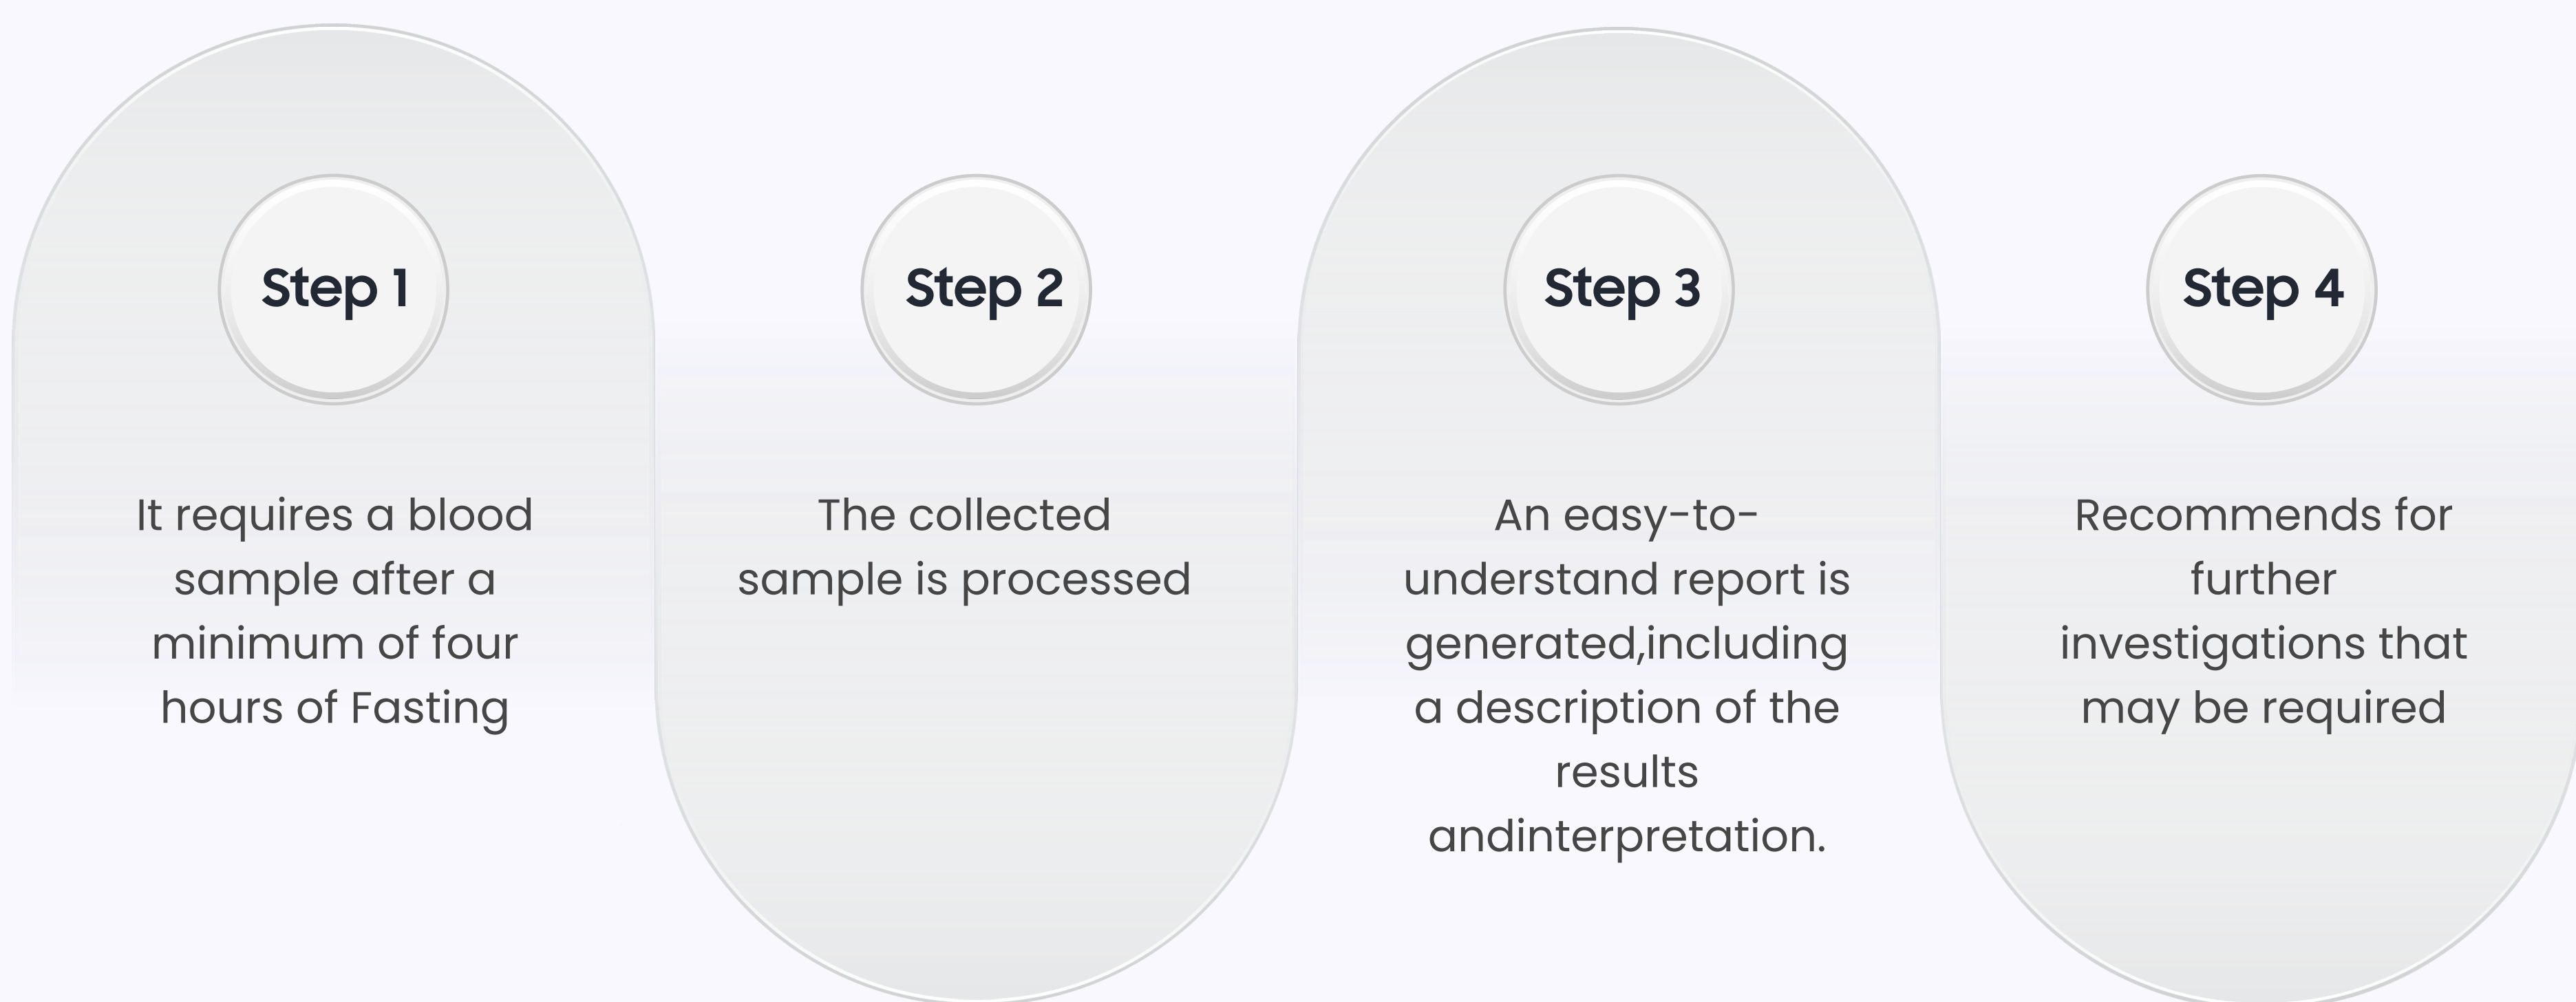

It is suitable for all adults suffering from gastric complaints as a part of routine investigation.

Stomach problems

It is suitable for all adults suffering from gastric complaints as a part of routine investigation.

HOW DOES IT WORK?

Note: Previous medical history should be provided when requesting the test. It helps adjust the diagnostic outcomes and risk assessment of your stomach condition

Important information required in the test request form:

There can be many causes for stomach complaints either less or excess acid. It is important to determine the underlying cause since problems such as these may lead.

- Helicobacter pylori eradication status
- Use of Proton Pump Inhibitors
- Presence of Stomach-acid-related symptoms
- Use of Non-steroidal anti-inflammatory drugs (NSAIDs)/pain-killer medication

WHY AND WHEN SHOULD A STOMACH HEALTH TEST BE TAKEN?

There can be many causes for stomach complaints either less or excess acid. It is important to determine the underlying cause since problems such as these may lead to other stomach illnesses and digestion disorders
